

⚠ 25 TRICKY MCQs (Exam-Style)

PART 1 — Select ONE

1

In Oracle ORDB, a **REF attribute** primarily represents:

- a. A pointer to another object table row
- b. A foreign key column
- c. A nested table element
- d. A primary key constraint

✅ Answer: a

2

Which statement about **VARRAY** is correct?

- a. It allows unlimited number of elements
- b. It stores elements in random order
- c. It has a fixed maximum size
- d. It must always contain objects

✅ Answer: c

3

Which statement about **Nested Tables** is TRUE?

- a. They are stored inline within the parent row
- b. They must use the STORE AS clause
- c. They must have fixed size
- d. They cannot store objects

✅ Answer: b

4

In Oracle inheritance, the default type behavior is:

- a. NOT FINAL
- b. FINAL
- c. ABSTRACT
- d. INSTANTIABLE

 **Answer: b**

5

Which of the following allows a type to have **subtypes**?

- a. UNDER
- b. NOT FINAL
- c. MEMBER
- d. REF

 **Answer: b**

6

Which method converts an object into a **scalar value** for comparison?

- a. MEMBER
- b. MAP
- c. ORDER
- d. REF

 **Answer: b**

7

Which XML language is mainly used for **querying XML documents**?

- a. XPath
- b. XML Schema
- c. XQuery
- d. XSLT

 **Answer: c**

8

Which indexing structure supports both **equality and range queries efficiently**?

- a. Hash index
- b. B+ Tree
- c. Heap file
- d. Static hashing

☒ **Answer: b**

9

In a **B+ Tree**, all leaf nodes:

- a. May be at different levels
- b. Store only index values
- c. Are at the same level
- d. Contain only pointers

☒ **Answer: c**

10

Which file organization is best for **equality searches only**?

- a. Heap file
- b. Sorted file
- c. Hashed file
- d. Clustered index

☒ **Answer: c**

PART 2 — Select ONE OR MORE

11

Which are valid **collection types in Oracle**?

- a. VARRAY
- b. Nested Table
- c. Set
- d. List

 **Answer:** a, b

12

Which are TRUE about **VARRAY**?

- a. Ordered collection
- b. Fixed maximum size
- c. Stored inline with parent row
- d. Unbounded size

 **Answer:** a, b, c

13

Which statements about **Nested Tables** are correct?

- a. Unbounded size
- b. Stored in separate table
- c. Always ordered
- d. Used for large collections

 **Answer:** a, b, d

14

Which are valid **XML technologies**?

- a. XPath
- b. XQuery
- c. XSLT
- d. SQL

 **Answer:** a, b, c

15

Which are characteristics of **extendible hashing**?

- a. Directory of pointers
- b. Dynamic bucket splitting
- c. Fixed number of buckets
- d. Avoids long overflow chains

☒ **Answer:** a, b, d

16

Which statements about **static hashing** are TRUE?

- a. Fixed number of buckets
- b. Uses overflow chains
- c. Performance may degrade as file grows
- d. Uses directory structure

☒ **Answer:** a, b, c

17

Which are **index types**?

- a. Dense index
- b. Sparse index
- c. Clustered index
- d. Balanced index

☒ **Answer:** a, b, c

18

Which are TRUE about **clustered indexes**?

- a. Data stored in same order as index
- b. Only one per table

- c. Supports multiple indexes
- d. Efficient for range queries

✓ **Answer:** a, b, d

19

Which XPath expressions are valid?

- a. //book
- b. book/title
- c. @lang
- d. book[last()]

✓ **Answer:** a, b, c, d

20

Which XQuery functions are valid?

- a. count()
- b. sum()
- c. distinct-values()
- d. filter()

✓ **Answer:** a, b, c

PART 3 — Very Tricky Concepts

21

Which statement about **REF columns** is TRUE?

- a. They can have PRIMARY KEY constraints
- b. They can only have NOT NULL constraint
- c. They store actual object data
- d. They replace nested tables

✓ **Answer:** b

22

Which keyword checks the **type of an object instance**?

- a. UNDER
- b. VALUE
- c. IS OF
- d. REF

☒ **Answer: c**

23

Which keyword is used to **access subtype attributes**?

- a. CAST
- b. TREAT
- c. VALUE
- d. UNDER

☒ **Answer: b**

24

Which statement about **MAP vs ORDER methods** is correct?

- a. Both can be used together
- b. Only one can be defined in a type
- c. ORDER returns scalar value
- d. MAP compares objects directly

☒ **Answer: b**

25

Which statement about **B+ Tree leaf split** is correct?

- a. Middle key is deleted
- b. Middle key copied to parent

- c. Middle key pushed to parent
- d. Entire node moved

✅ **Answer: b**

Great 👍 Here are **10 SUPER-TRICKY questions** lecturers commonly use to confuse students in **Database / ORDB exams**. These are based on **common mistakes listed in your study guide** like forgetting /, nested table storage, REF constraints, B+ tree split behavior, etc.

⚠️ **10 SUPER-TRICK MCQs (Very Likely Exam Traps)**

1

Which statement about **Oracle object type creation** is TRUE?

- a. The / after CREATE TYPE is optional
- b. The / is required to store the type definition
- c. The / is only used for nested tables
- d. The / is used only in PL/SQL blocks

✅ **Answer: b**

⚠️ **Common trap:** forgetting / after type definition.

2

Which constraint is **NOT allowed** on a REF column?

- a. NOT NULL
- b. CHECK
- c. PRIMARY KEY
- d. FOREIGN KEY

✅ **Answer: c**

⚠️ Oracle **does NOT allow PRIMARY KEY or UNIQUE** on REF columns.

3

Which statement about **nested tables** is FALSE?

- a. They are stored in a separate table
- b. They require a STORE AS clause
- c. They always preserve element order
- d. They can contain object types

✓ Answer: c

⚠ Nested tables are **unordered**.

4

Which statement about **VARRAY** is FALSE?

- a. Ordered collection
- b. Fixed maximum size
- c. Stored inline with parent row
- d. Unlimited number of elements

✓ Answer: d

5

Which query is **correct for accessing attributes through REF**?

a.

SELECT bar.name FROM Sells;

b.

SELECT s.bar.name FROM Sells s;

c.

SELECT name.bar FROM Sells;

d.

SELECT REF.bar.name FROM Sells;

✓ Answer: b

⚠ Must use **table alias** when dereferencing.

6

Which statement about **B+ Tree leaf split** is TRUE?

- a. Middle key pushed up to parent
- b. Middle key copied to parent
- c. Middle key deleted
- d. Leaf node becomes root

✅ Answer: b

⚠ Leaf split = COPY UP

⚠ Index split = PUSH UP

7

Which statement about **static hashing** is FALSE?

- a. Fixed number of buckets
- b. Overflow chains may occur
- c. Supports range queries efficiently
- d. Uses hash function

✅ Answer: c

8

Which event causes **directory doubling in extendible hashing**?

- a. When bucket becomes empty
- b. When local depth < global depth
- c. When local depth = global depth before split
- d. When file size increases

✅ Answer: c

9

Which of the following is TRUE about **clustered indexes**?

- a. Multiple clustered indexes allowed per table
- b. Only one clustered index allowed per table
- c. Clustered index always sparse
- d. Clustered index stores XML

 **Answer: b**

10

Which XPath expression selects **all book elements anywhere in the document**?

- a.
/book
- b.
bookstore/book
- c.
//book
- d.
book/book

 **Answer: c**
